

Overview

This document provides a snapshot of the various data resources that currently exist to support our work. This includes the SchoolView system, the DISH tool, along with other posted resources.

SchoolView

www.schoolview.org

School View is a one-stop resource for CDE staff, districts, parents and community members to learn about the performance of schools and districts across the state. It is organized into two key areas, 1) School Performance, and 2) the Colorado Growth Model.

School Performance content includes:

- School/District Performance Framework Reports and UIPs
- Data Lab: Build your own reports from student assessment and demographic data.
- Data Center: District & School Data regarding Accountability, Performance, Students, Staff, Finance, Course, and Health Data.

Colorado Growth Model content includes:

- School and District Growth Reports
- Growth Model Visualization: Tool to display performance and growth data for Colorado districts and schools.
- Growth Model Tutorial and Learning Resources

District Data Dashboard (DISH)

<http://www.schoolview.org/dish/dashboard.asp>

The district dashboard, an internal tool, also known as DISH, aggregates and visualizes financial, demographics, accountability, postsecondary, and performance data in one centralized format for all Colorado school districts. DISH includes several interactive features allowing you to see performance over time, the performance of disaggregated student groups, the ability to locate similar districts based on demographics, and compare district data side-by-side.
